Profile

I am a student with the capability of self-learning, with good communication skills (I was the head of my class at school, and I am the head of my group at the university now. Because of that, I have experience in organizing different events and dealing with conflict situations). I have a clear goal - to become a good Android Developer. I will do my best to achieve that goal.

Technical skills

-English B2 (I didn't pass tests like IELTS, but I passed ZNO 1 year ago(got 193 points). I was preparing for the exam with the book "Use of English B2", also after a year of studying at speciality "Software Engineering" I can read documentation with no difficulties)

-Java:

Core

Collections

-Kotlin

-Android (Activity and Fragment lifecycle, tasks and back stack, Service, Broadcast Receiver, View and Layouts, Animations, Resources and Configuration, Thyme and Style, Multithreading, view binding, data binding, navigation component)

-Data Structures and Algorithms

-A few of the Design Patterns(Builder, Abstract Factory, Singleton, Adapter, Facade, Observer)

-Git

Of course, there is a lot of space to improve on each of the topics.

You can see my projects on these topics on my [GitHub](#).

Education

Hight school

Sep 2010 - May 2021

Zolochiv Markian Shashkevych School №2, Zolochiv

I like learning new things. That's why I had good marks at school. However, my favourite subjects were Math and Physics. I also was fond of programming, but I knew there would be no IT exam at the end of school, so I focused most of my efforts on Math and Physics. I am truly enjoying competing with my peers, so I took part in most of the olympiads at my school. Every year I was first in Math and Physics(At Lviv Region I took second or third place). Also, from time to time, I had top places in Biology, Chemistry and Programming. Besides, I got acquainted with programming languages such as Pascal, C++ and Java during my school years.

University

Sep 2021 - Present

Ivan Franko National University of Lviv, Lviv

Currently, I am studying at the Ivan Franko National University of Lviv in the Faculty of Electronics and Computer Technologies(speciality "Software Engineering"). I have been studying at University only for a year. However, I have learned a lot about information technologies, for example, computer networks, basics of programming(C language), version control systems(Git), object-oriented programming(C++ language), linear algebra, calculus, and discrete math.

Employment

Math Tutor

Jun 2021 - Oct 2021
